

beadedstream designs, manufactures and distributes world-class temperature monitoring solutions for multi-use industrial applications. Our product pipeline offers best-in-class temperature measurement and monitoring solutions allowing you to rapidly deploy digital temperature cables and loggers and then collect, store and analyze your data in the cloud.

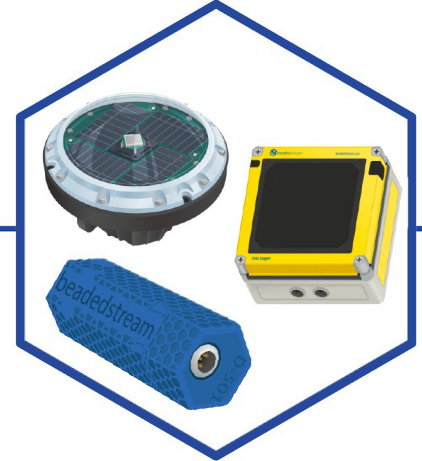

► CABLES

beadedstream Digital Temperature Cables and Probes measure accurate, multi-level sub-surface temperature points. Standard and custom designs are available.

► SPECIALITY SENSORS

Additional sensors are available to monitor complementary parameters such as tank or pipeline temperature and air temperature.

► DATA LOGGERS

Our catalog includes loggers with remote data collection via Iridium satellite, spot loggers for use on site and a fully waterproof buoy logger for use in bodies of water.

► ANALYTICS

Securely access and analyze your data 24/7 with our **beadedcloud** online dashboard. Login from desktop or mobile devices to see you data on time-series or profile graphs or download in a .csv file.

► DATA DELIVERY

Collect data from our satellite loggers installed anywhere in the world. Satellite data is stored in our secure, cloud based server, **beadedcloud**. All loggers are compatible via Bluetooth with our iOS app ([Capture App](#)).

► THIRD PARTY LOGGER INTERFACES

Our temperature cables are compatible with third party loggers via our interfaces that supports SDI-12 and Modbus RS485 protocols. We also offer SCADA and network system support via our ethernet interface.
